

Instructions: The “Introductions & Transitions” handout that you just received contains the beginning of the chapter on Limits from three different Calculus textbooks. Please answer the following after reading through these excerpts.

1. Which of these three textbook chapters has the most effective introduction? What specific features make it effective?
2. What made the other two introductions less effective? How could they be improved?
3. How do each of the textbook chapters manage the transition from the introduction to the chapter (and section) content? Are the transitions smooth and well written?
4. Pick one transition that you feel is effective. Why is it effective?
5. Pick one transition is not completely effective? How could it be improved?
