

Math 491 - Mathematical Writing

Journal Assignment #3

Due: By 4:00pm on Monday, February 11th

**Instructions:**

This Journal Assignment will be a bit different from the previous ones that you have been assigned. For this assignment, the goal is for you to think through and to begin to formalize two processes. Based on what you have learned so far in this course (from the readings and from our discussions during class time), your previous experiences, and your sense of what would be effective for you as an individual, please describe (in a reasonably detailed manner) each of the following.

- A clear and effective process that you plan to use in order to write and revise formal mathematical papers (as the primary author of the final product).
- A clear and effective process that you plan to use to review and give feedback on formal mathematical papers (for someone else's paper).
