1. For the compound methanol, CH₃OH, which of the following statements is true for the oxygen atom?
   a. It has no formal charge, but has a slight negative charge, δ-
   b. It has no formal charge, but has a slight positive charge, δ+
   c. It has a formal +1 charge.
   d. It has a formal -1 charge.

2. Draw an appropriate Lewis structure nitric acid HNO₃ (which has structure HONO₂) Which of the following statements is true? (Note: hard one, can’t do without formal charges.)
   a. none of the atoms has any formal charge
   b. the nitrogen has 4 bonds and a formal charge of +1. One of the two oxygens is doubly bonded with no formal charge; the other is singly bonded with formal charge -1. A second equivalent resonance structure can also be drawn.
   c. the hydrogen atom is bonded to nitrogen
   d. the nitrogen has a formal charge of -2
   e. two of the oxygens are doubly bonded to the nitrogen, and neither has any formal charge. The other oxygen is singly bonded to both the nitrogen and the hydrogen, and also has no formal charge.

3. Circle the TWO true statements relative to the structure shown? (Assume enough lone pairs to satisfy octet rule for each atom; but there are some formal charges.)
   a. For lone pairs, O(1) would have two; N(2) one; and O(3) two
   b. For lone pairs, O(1) would have two; N(2) none; and O(3) three
   c. For lone pairs, O(1) would have one; N(2) one; and O(3) three
   d. For formal charges, O(1) would be neutral; N(2) cation; and O(3) anion
   e. For formal charges, O(1) would be neutral; N(2) neutral; and O(3) anion
   f. For formal charges, O(1) would be anion; N(2) cation; and O(3) neutral

4. Which of the following represent pairs of resonance structures? (If you select only one pair when two pairs qualify, you won’t get credit.)
   a. only
   b. only
   c. only
   d. Both a and c.
   e. Both a and b
   f. Both b and c.

5. Rank the acidity of the following chemicals, from most acidic to least acidic: (think Anion stability!)
   a. HF > CH₃CH₂OH > CH₃CH₂CO₂H >CH₃CH₂NH₂
   b. HF > CH₃CH₂CO₂H > CH₃CH₂OH > CH₃CH₂NH₂
   c. HF > CH₃CH₂NH₂ > CH₃CH₂CO₂H > CH₃CH₂OH
   d. CH₃ CH₂CO₂H > CH₃CH₂OH > CH₃CH₂NH₂ > HF
