

MSUM Library

honors the 2009 tenure/promotion of

Dr. Juan Cabanela

Physics / Astronomy

Sandage, Allan. *The Hubble Atlas of Galaxies*. Carnegie Institution of Washington, 1961

Associate Professor Cabanela chose this book because:

This classic work shows photographs of all the major types of galaxies in Hubble's classic tuning fork diagram of galaxies and is meant to train the young astronomer in the art of classifying galaxies based on their appearance. The book was published before I was born and more detailed images of galaxies now exist. That said, opening this book always reminds of why I became an astronomer. Because there is still a lot of beauty in the universe, and some of it is waiting to be discovered.
