

C.27 Circumcenter of a Triangle / Circumscribing a Circle About a Triangle (2 steps):

1. construct at least two perpendicular bisectors of the sides of a triangle (the intersection of the perpendicular bisectors, P_4 , is the circumcenter)

*refer to C.5 for
instructions on
constructing a
perpendicular
bisector*

2. place the compass tip on the circumcenter, P_4 , and adjust the compass to a vertex, P_1 (this is the radius of the circumscribed circle), then construct the circumscribed circle

C.30 Orthocenter of a Triangle (1 step):

1. construct at least two altitudes of the triangle (the intersection of the altitudes, A, is the orthocenter)

*refer to C.9 for
instructions on
constructing a
perpendicular
from a point off
a segment*

C.28 Incenter of a Triangle / Inscribing a Circle Within a Triangle (3 steps):

1. construct at least two angle bisectors of the triangle (the intersection of the angle bisectors, P_4 , is the incenter)

*refer to C.6 for
instructions on
constructing an
angle bisector*

A+ Compass™

Step-by-Step Constructions

refer to C.9 for instructions on constructing a perpendicular through a point off a segment

2. from the incenter, construct a perpendicular to any side of the triangle (this is the radius of the inscribed circle)

Men of Mathematics:
The Lives and Achievements of the Great Mathematicians from Zeno to Poincare' by E.T. Bell

Isaac Newton's description of himself "I do not know what I may appear to the world; but to myself I seem to have been only like a boy playing on the seashore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me."

A+ Compass™

Step-by-Step Constructions

3. place the compass tip on the incenter and adjust the compass to the measure of the perpendicular from step #2, then construct the inscribed circle

Adams, John
(1735 - 1826)

*I must study
politics and
war that my
sons may have
liberty to study
mathematics
and
philosophy. My
sons ought to
study
mathematics
and
philosophy,
geography,
natural history,
naval
architecture,
navigation,
commerce and
agriculture in
order to give
their children a
right to study
painting,
poetry, music,
architecture,
statuary,
tapestry, and
porcelain.*

*Letter to
Abigail Adams,
May 12, 1780*

C.29 Centroid of a Triangle (2 steps):

1. construct at least two perpendicular bisectors of the triangle, label the midpoints A and B

*refer to C.5 for
instructions on
constructing a
perpendicular
bisector*

A+ Compass™

Step-by-Step Constructions

2. connect each midpoint, A and B, to its opposite vertex, P_3 and P_2 to form medians AP_3 and BP_2 . The point of intersection of these two medians is the centroid, C

*Chesterton, G.
K. (1874 -
1936)*

*It isn't that they
can't see the
solution. It is
that they can't
see the
problem.*

*The Point of a
Pin in The
Scandal of
Father Brown.*

A+ Compass™

Step-by-Step Constructions

connect the circumcenter (A), centroid (B), and orthocenter (C) with a single line, this is Euler's Line

*Leonhard
Euler
[upon
losing the
use of his
right eye]*

*Now I will
have less
distraction.*

*Quoted in
H Eves In
Mathematical
Circles
(Boston
1969).*
