Reactions of Ketones and Aldehydes

Mech: Addition-Protonation. Strong nucleophile, Strongly anionic. Irreversible.

$$20 \xrightarrow[A]{Protonate} OH$$

$$18.12,$$

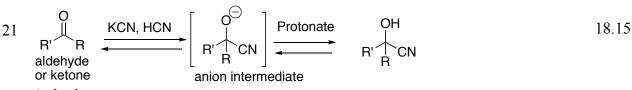

$$10.11$$

$$10.11$$

$$10.11$$

Anionic

Mech: Addition-Protonation. Strong nucleophile, Strongly anionic. Irreversible.

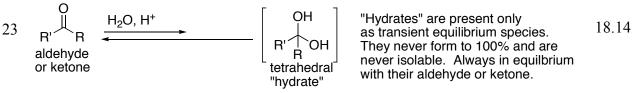

Anionic

Mech: Addition-Protonation. Medium nucleophile, Weakly anionic; literally buffered. Reversible.

Anionic

Mech Forward: Addition-Protonation. Nucleophile, anionic mechanism. Reversible. Mech Reverse: Deprotonation-Elimination. Anionic mechanism. Reversible.

<u>Cationic</u>

Mech Forward: Protonation-Addition-deprotonation. Weakly nucleophile, cationic mechanism. Reversible.

Mech Reverse: Protonation-Elimination-deprotonation. Cationic E1-type mechanism. Reversible.

24
$$\begin{array}{c} O \\ R' \\ aldehyde \\ or ketone \end{array}$$
 $\begin{array}{c} ROH, H^+ \\ H_2O, H^+ \\ H_2O, H^+ \end{array}$ $\left[\begin{array}{c} OH \\ R' \\ R \\ H_2O, H^+ \\ hemiacetal'' \end{array} \right] \xrightarrow{ROH, H^+} \\ H_2O, H^+ \\ H_2O, H^+ \\ acetal \end{array}$ $\begin{array}{c} OR \\ R' \\ H_2O, H^+ \\ acetal \end{array}$ $\begin{array}{c} 18.18 \\ R' \\ R \\ acetal \end{array}$ $\begin{array}{c} 18.18 \\ R \\ 18.19 \\ R \\ acetal \end{array}$

Cationic

Mech Forward: Protonation-Addition-deprotonation (hemiacetal) Protonationelimination-addition-deprotonation (acetal). Weak nucleophile, cationic mechanism. Reversible.

Mech Reverse: Protonation-Elimination-Addition-deprotonation. (hemiacetal) protonation-elimination-deprotonation (aldehyde or ketone). Reversible.

Notes:

- Reactions are reversible
- The "hemiacetal" is an intermediate, and can never be isolated
- The acetal <u>can</u> be isolated.
- Equilibrium considerations (LeChatelier's principle) apply. When water is plentiful, things go to the left. When water is scarce or removed, and alcohol is abundant, things drive to the right.
- Use H_2O/H^+ to hydrolyze an acetal back to an aldehyde or ketone
- Use MeOH/H⁺ to convert an aldehyde to an acetal
- Use $HOCH_2CH_2OH/H^+$ to convert a ketone to an acetal
- Aldehydes or ketones can be temporarily "protected" as their acetals, then later "deprotected" by hydrolysis

25
$$\underset{\text{aldehyde} \text{or ketone}}{\mathsf{N}^{2}} \stackrel{\mathsf{C}}{\underset{\mathsf{H}_{2}}{\mathsf{O}}} \stackrel{\mathsf{Z}\mathsf{N}\mathsf{H}_{2},\mathsf{H}^{+}}{\underset{\mathsf{H}_{2}}{\mathsf{O}},\mathsf{H}^{+},-\mathsf{Z}\mathsf{N}\mathsf{H}_{2}} \begin{bmatrix} \mathsf{O}\mathsf{H} \\ \mathsf{R}' \underset{\mathsf{R}}{\overset{\mathsf{N}}{\mathsf{H}_{2}}} \stackrel{\mathsf{H}_{2}}{\underset{\mathsf{R}'}{\mathsf{H}_{2}}} \stackrel{\mathsf{N}\mathsf{Z}}{\underset{\mathsf{R}'}{\overset{\mathsf{N}}{\mathsf{H}_{2}}}} \stackrel{\mathsf{N}\mathsf{Z}}{\underset{\mathsf{R}'}{\overset{\mathsf{N}}{\mathsf{R}}}} \stackrel{\mathsf{N}\mathsf{Z}}{\underset{\mathsf{R}'}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}\mathsf{R}'}{\underset{\mathsf{R}'}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}\mathsf{R}'}{\underset{\mathsf{R}'}{\underset{\mathsf{R}'}{\underset{\mathsf{R}'}}}} \stackrel{\mathsf{N}\mathsf{R}'}{\underset{\mathsf{R}'}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}{\underset{\mathsf{R}'}} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}} \stackrel{\mathsf{N}}{} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}} \stackrel{\mathsf{N}}}{} \stackrel{\mathsf{N}}}$$

Cationic

Mech Forward: Protonation-Addition-deprotonation (aminol) Protonationelimination- deprotonation (imine). Mild nucleophile, cationic mechanism, buffered conditions. Reversible. Note: sometimes addition precedes protonation, or is concerted with protonation.

Mech Reverse: Protonation-Addition-deprotonation (aminol) Protonationelimination- deprotonation (aldehyde or ketone). Reversible.

Notes:

- "Z" can be a carbon, nitrogen, oxygen, or hydrogen atom/group.
- The "aminol" can't be isolated, it's only present at equilibrium.
- Equilibrium factors apply. Water drives to the carbonyl side; removal of water drives to the imine side.

$$26 \qquad \underset{\mathsf{R}'}{\overset{\mathsf{O}}{\overset{\mathsf{H}}{\overset{\mathsf{H}}{\overset{\mathsf{C}}{\mathsf{rO}_4} \text{ or } \mathsf{Ag}^+ \text{ etc.}}{\overset{\mathsf{O}}{\overset{\mathsf{O}}{\overset{\mathsf{H}}{\overset{\mathsf{O}}{\mathsf{rO}_4}}}}} \qquad 18.20$$

No Mech Responsibility

"Tollens test" is a common chemical test for aldehydes. Ag^+ undergoes redox reaction with aldeydes to produce shiny Ag metal, or a "silver mirror".

27
$$R' R \xrightarrow{O} Zn(Hg), HCl \xrightarrow{Acidic!} R' R \xrightarrow{Acidic!} 18.21$$

Notes:

- Acidic conditions. Doesn't work well for molecules with acid-sensitive functionality.
- Works best for aromatic carbonyls. Saturated carbonyls are slower and less efficient.
- Acidic nature is complementary to the basic analog below.

$$28 \xrightarrow{\text{O}}_{\text{R'}} \xrightarrow{\text{I. H}_2\text{N-NH}_2}_{\text{R}} \xrightarrow{\text{R'}}_{\text{R}} \text{Basic!}$$
18.21

No Mech Responsibility

Notes:

• Basic conditions. Doesn't work well for molecules with base-sensitive functionality.

Basic nature is complementary to the acidic analog above.

No Mech Responsibility Notes:

• Unique access to 2-hydroxyacids.. Used in combination with reaction 21, the formation of the hydroxy-nitrile.
